I see. Anyway, if shared library references to symbols defined in another shared library, then it should link with that library. That is, I suggest to merge libvzctl-simfs back to libvzctl. Also, I suggest to move "g_log" symbol from vzcfgvalidate binary to libvzctl. After that, libvzctl will be self-contained, thus enabling both --as-needed and prelink support.

At least, I had to apply these changes to package vzctl for Sisyphus.
