Hi !

I'm trying to change the IP address for a CT made with vzdump.

This is what I got :

```
vzctl set 101 --ipdel all --save
```

...

Adding IP address(es):

```
bash: line 575: ./ifup-aliases: No such file or directory
```

```
Saved parameters for VE 101
```

```
vzlist
```

VEID	NPROC	STATUS	IP_ADDR	HOSTNAME
101	26	running	-	xxxx.xxxxxxx.com

Then, i do :

```
vzctl set 101 --ipadd 193.37.145.79 --save
```

Adding IP address(es): 193.37.145.79

```
bash: line 575: ./ifup-aliases: No such file or directory
```

```
Saved parameters for VE 101
```

```
vzlist
```

VEID	NPROC	STATUS	IP_ADDR	HOSTNAME
101	26	running	193.37.145.79	xxxxx.xxxxxxx.com

Inside the CT, the IP address seems to be changed in the /etc/hosts (for example), but if i do a ifconfig the CT has the old IP address :

```
cat /etc/hosts
```

...

# Auto-generated hostname. Please do not remove this comment.  
193.37.145.79 xxx.xxxxx.com xxxx

ifconfig

```
...  
venet0:0 Link encap:UNSPEC HWaddr 00-00-00-00-00-00-00-00-00-00-00-00-00-00-00-00  
    inet addr:193.37.145.27 P-t-P:193.37.145.27 Bcast:0.0.0.0 Mask:255.255.255.255  
    UP BROADCAST POINTOPOINT RUNNING NOARP MTU:1500 Metric:1
```

I'm using Debian Lenny 64 :

2.6.18-20-ovz-amd64

Thanks for your help !
