you wroted that:
Usable secondary addresses: 174.142.167.217-222
Mask : 255.255.255.248

who gave you this ip addresses?
they are not public, they are private ip addresses
 http://en.wikipedia.org/wiki/Private_network#Private_IPv4_ad dress_spaces

as i see you have only one public ip address

so if you want to have internet inside VE do following config:
remove all the eth aliases (eth0:0 - eth0:x), leave only eth0

add private ip address to VE (for example 174.142.167.217)
then do

echo 1 > /proc/sys/net/ipv4/ip_forward
iptables -t nat -A POSTROUTING -o eth0 -j MASQUERADE

that's all
if you want to have VE with public ip addresses ask them from your provider and assign them to
VE.

if you want assign services for your VE and you have only one public ip just forward port to you
VE in HN.
