Hi, I don't know where I should be posting this, but I am using proxmox (using openvz) for centos (proxmox template) and I can't get it to set the route in my openvz VM. In /etc/sysconfig/network I have

```
networking="yes"
```

```
gateway="92.25.11.254"
```

```
hostname="cpanel"
```

I have rebooted the VM and it still doesn't work, route -n shows:

Kernel IP routing table

Destination	Gateway	Genmask	Flags	Metric	Ref	Use	Iface
169.254.0.0	0.0.0.0	255.255.0.0	U	0	0	0	eth0
