Oh great. I had a problem with a set up a existing box for a host OpenVZ with the KVM.
Seems like that the 2.6.27.42-chistyakov.1 doesn't recognize the

0000:01:00.0: eth0: (PCI Express:2.5GB/s:Width x1) 00:30:48:bd:ec:58
0000:01:00.0: eth0: Intel(R) PRO/1000 Network Connection
0000:01:00.0: eth0: MAC: 3, PHY: 8, PBA No: 0101ff-0ff
e1000e: eth0 NIC Link is Up 1000 Mbps Full Duplex, Flow Control: None

that's why would be better to have the OpenVZ with 2.6.31/32. I know that I can backport the
latest Intel e1000 code to the 2.6.27 and commit patch to the chistyakov...

Anyway, where can I find the RH 6.0 src packages ? Few times ago was a smth like a "Rawhide"
where I was able to find the latest sources and pre-packages for a RedHat and port few patches
to the PLD Linux (that was a long time ago) Is is still somewhere in RedHat ?
