Subject: Re: (NAT Internet for containers) in a container
Posted by alevchuk on Fri, 05 Mar 2010 21:55:34 GMT

Dear Stig,

Thank you for your feedback.

My N is already using a binded NIC to access the Internet, but that does not help. And it would really suck if I have to switch all containers to veth.

My reasoning for moving the NAT service away from using the Hardware Node (HN) is two fold:
  1. The sysadmin work becomes much cleaner when I separate the various services into dedicated containers.
  2. I want to move away from having Internet on the HN. I'm running a local approx container, so Internet access is not needed to do the OS updates on the HN.

Alex
