Subject: Lucid VE on a CentOS 5.3 Node

I am trying to setup an ubuntu 10.4 (Lucid) VE on a centOS 5.3 Node (
2.6.18-128.2.1.el5.028stab064.7PAE) running openvz. Is it a possible combination or is the
2.6.18 kernel too old for Lucid ?

I have created the VE image with debootstrap, but I always get the famous "enter into CT 102
failed Unable to open pty: No such file or directory" message. I have tried to fix this with
MAKEDEV and with update-rc.d -f udev remove... It did not help. Did somebody already
managed to "virtualize" Lucid ?
