Hi,

OpenVZ is a nice project! And i'm happy to join this community!!

I found documentation here : <http://wiki.openvz.org/>

Virtual_Ethernet_device but i haven't found any information on theses questions :

- what is a venet? (bridge? vlan?) And
- how is it created?

Could someone explain me how does it work?

P.S : I'm running a debian sarge 3.1 on pentium M 1.7Ghz with 512MB

Thank you

- Rachid
