Subject: openvz node centos version
Posted by luispt on Thu, 18 Mar 2010 01:26:13 GMT

Hello,

I'm creating a new node to migrate about 20 containers from an old server. the old server has centos 5.4 i686, but i want to install x64 on the new one. Since all the vms on old server are using 32bit, is it possible to import them to a new node running 64bit?

thanks in advance.
