Subject: Help config VPSs in server i7
Posted by magic1000 on Wed, 31 Mar 2010 12:12:55 GMT

Hello.

I have a problem when config VPSs in server. Because server is use CPU i7 920, have 4 core, 8 thread.

So server only working up to 50% CPU of 8 CPU (I use top command).

Help me config VPSs only used 25% core. If I have 16 node in this server.

Will I set cpulimit is 50 or 25?
