Hello everyone.

I have a problem while running latest 2.6.32-afanasyev.1 kernel under fresh Ubuntu 9.10-server/amd64 installation.

Under HW node:

```
# lsmod|grep iptable
iptables_nat      5708  0
nf_nat            19845  1 iptable_nat
iptables_mangle   3235  0
# cat /proc/net/ip_tables_names
mangle
filter
# iptables -t nat -L
FATAL: Module ip_tables not found.
iptables v1.4.4: can't initialize iptables table `nat': Table does not exist (do you need to insmod?)
Perhaps iptables or your kernel needs to be upgraded.
# fgrep IPTABLES kernel-2.6.32-x86_64.config.ovz
CONFIG_VE_IPTABLES=y
CONFIG_IP_NF_IPTABLES=y
CONFIG_IP6_NF_IPTABLES=m
```

Why ip_tables compiled in? Latest 2.6.26-2-openvz from Lenny has it separated. How I can get iptable_nat works under HW node?
