Subject: [Resolved] Destroyed VE but still /proc/bc/$VEID
Posted by inioo on Wed, 14 Apr 2010 14:07:35 GMT

My problem was solved indirectly. I had to restart the HN, so resources informations about 222 VM was suppressed.

Quote:
I destroyed two testing VE with

sudo vzctl destroy 222
sudo vzctl destroy 777

I delete VEID.conf.destroyed file. But if I do :

vzmemcheck -vA

The 222 veid is still showed. In /proc/bc/ I have a 222 folder with :

sudo ls
ioacct ioprio ioprio_queues resources vmaux

How can I fix this ? Thank you.
