use
Name: ovzkernel
Arch: x86_64
Version: 2.6.18
Release: 164.11.1.el5.028stab068.3

vzctl set 005 - slmmode slm - save
in response to issues
005: unrecognized option `- slmmode '
although if you specify this option in the config startup VE error does not extradite
but the work is not noticeable SLM something
