use

Name: ovzkernel

Arch: x86_64

Version: 2.6.18

Release: 164.11.1.el5.028stab068.3

vzctl set 005 - slmmode slm - save

in response to issues

005: unrecognized option ` - slmmode '

although if you specify this option in the config startup VE error does not extradite

but the work is not noticeable SLM something
