Subject: Migrate 32bit to 64bit
Posted by maxh on Fri, 23 Apr 2010 20:50:39 GMT

Hi guys.
Couldn't find anything helpful in the forum.

Simple question: I have a system running. (2.6.18 openvz patched) on a 32bit system (debian).
I just bought a new system (quadcore) and would like to install amd64. Is it possible to do so and migrate the container? Are there any problems that might come up?

Thank you very much for your help guys!
Greetings from Germany
