Subject: *SOLVED* Internet Connectivity

I created a new VE on my host node, with 102, using the default template.

I gave it a public IP at the data centre. Here's the weird thing:

(a) From my home computer, I can ping the hostnode (.2) and the VE (.4)

(b) However, inside the VE (.4), I cannot ping outside. I cannot access any IP other than the hostnode (.2).

Any ideas to solve this, would be greatly appreciated

Cheers!
