Hello,

I had some other issues with my HN, so I had to reinstall it

I did exactly the same as before, but I didn't execute :
modprobe xt_tcpudp
modprobe ip_conntrack
modprobe xt_state
On the HN.

But, I can see them loaded with a lsmod

root@Zoidberg:~# lsmod | egrep "xt_tcpudp|ip_conntrack|xt_state"
xt_tcpudp   12160 12
xt_state   11264 3
nf_conntrack   102880 2 nf_conntrack_ipv4,xt_state
x_tables   34056 13
xt_comment,xt_tcpudp,ipt_LOG,xt_state,xt_length,ipt_ttl,xt_tcpmss,xt_TCPMSS,xt_multiport,xt_li
mit,ipt_tos,ipt_REJECT,ip_tables

I don't know if this changes something, but now it works perfectly
Both on HN, and in Containers

So, please, consider this topic as [RESOLVED]
