Using venet0:1 with assigned 172.168.1.29 ip on VE, if I add route on VE:

ip route add 172.168.1.0/24 dev venet0 src 172.168.1.29

I still cannot ping any host on the subnet.

I need to use venet and not veth, reason is that there are live systems running on eth0, and I cannot take down this interface (create bridges etc...)
