CentOS 4 is basically the same as RHEL 4, so you'd better start with it. The problem with RHEL4 is binary RPMS are not available (unless you bought a CD), so there is no template for RHEL.

Still, if you do have RHEL4 binary rpms you can put them to some directory, run createrepo on it and then take CentOS 4 template, copy it to /vz/template/rhel/4/ directory as it was suggested above, and then change /vz/template/rhel/4/i386/config/yum.conf to point to that directory with RHEL 4 rpms.
