---

CENTOS 5, is an enterprise level OS(EL5)

DEBIAN and their off-spring, is a desk-level distro, that I never cared about, even in the old days.

What I'm gearing up to do, is moving off CENTOS 5.4, to CAOS NSA.

I want to experiemnt with HA Clustering, and using CAOS/PERCEUS, would be a good starting point.

It is REDHAT underneath.

I think REDHAT is a good choice for OVZ, and I personally think

DEBIAN use is waining. (ask my customers)

It would be nice, to hear from Kir.
