## Subject: Unable to stop VPS after vzdump ?
Posted by ppmartin on Thu, 27 May 2010 10:10:43 GMT

I am running openvz on a HP Proliant ML350 G5 with Smart Array Controller.
System is in Raid1, data in Raid6.
Openvz rev is:
 * vzctl        3.0.23-1pve11
 * vzdump        1.2-5
 * vzprocps     2.0.11-1dso2
 * vzquota       3.0.11-1dso1
Kernel is:
  Linux transat 2.6.24-7-pve #1 SMP PREEMPT Fri Aug 21 09:07:39 CEST 2009 x86_64
GNU/Linux

Problem is the following:
VPS 155 runs an application performing Postgres operations at backup time and
I get this error:
 '/usr/sbin/vzctl chkpnt 155 --suspend' failed with exit code 16

After that, VPS can not be stopped or restarted:
  Stopping container ...
  Unable to stop container: operation timed out

To solve the pb I have to restart the openvz server ... which restarts also all
other VPS and leads to service disruption.

Trace of a vzstop is attached.

Thanks to help
