
Subject: Can I install OpenVZ *without Console access* ?

I'm just wondering if I can actually install OpenVZ on my rented server (dedicated hardware node), since they don't give me access to the Console; "they" install the distribution (of my choice) for me, and they would probably charge me a lot to build and install an "OpenVZ" kernel (as long as OpenVZ hasn't made it into the mainline).

The short version is: Can I change the kernel myself over SSH?
