---

I have 3 VPS in with Centos 5.4 64 bits and uname -a reports: Linux develop  
2.6.18-164.15.1.el5.028stab068.9 #1 SMP Tue Mar 30 18:07:38 MSD 2010 x86\_64 x86\_64  
x86\_64 GNU/Linux

The problems is that dmesg shows nothing in the 3 VPS's and some applications which were reporting in /var/log/messages are not reporting now.

I HN dmesg is working well.

Another issue with that is that iptables is not logging in /var/log/messages. My iptables rules are:  
iptables -A INPUT -j LOG --log-prefix '\*\* IPTABLES \*\*' --log-level 4  
iptables -A OUTPUT -j LOG --log-prefix '\*\* IPTABLES \*\*' --log-level 4

I was googleing a lot and I could not find any answer.

People could you help me?
