I have a CentOS 5.5 container setup to allow a regular user to mount and umount a dvd that has a ext2 fs. I created the mount point, added fstab entry, and setup container device file. Mounting is no problem. I can read data ok. Umounting does not work for regular user.

```
[rray]$ umount /dev/dvd  
umount: only root can unmount /dev/dvd from /mnt/dvd
```

Root can umount just fine. Any suggestions?

Richard
