I have a weird problem.

I have one machine, with two network interfaces.

Eth0: 10.10.10.0/24

Eth1: 192.168.0.0/24

I have four containers on the machine:

10: IP:10.10.10.10 GW:10.10.10.254

11: IP:10.10.10.11 GW:10.10.10.254

12: IP:10.10.10.10 GW:10.10.10.254

50: IP:192.168.0.50 GW:192.168.0.1

Sometimes all the containers wanting to access on Eth1 instead of Eth0.

Why?
