Curious concept.

Which embedded platform?

Of course,you need some form of OS,but as far as a distro setup,you can do a bare-bones install.(no X-Windows,Gnome,KDE,etc)

This in most cases,amounts to less than 500M in size,and is preferred.

My Node is bare-bones,but have added some additional side-packages for security and monitoring.

REDHAT is "default" for OVZ(Centos5),and DEBIAN works well also.

I use Fedora 9.
