Not sure what is going on but just upgraded using yum and when I restart the vz service it fails to start and VEs. I don't dare shut down what is currently running because I'd be out of business.

Bringing down interface venet0: [OK]
Stopping OpenVZ: [OK]
Starting OpenVZ: [OK]
Bringing up interface venet0: [OK]
Starting CT 115: [FAILED]
Starting CT 135: [FAILED]

vzctl says:

2010-06-30T13:19:45-0700 vzctl : Setting CPU units: 1000
2010-06-30T13:19:45-0700 vzctl : WARNING: Settings were not saved and will be reset to original values at the next start (use --save flag)
2010-06-30T13:20:01-0700 venetclean : CT 115 : CT died, clear IPs:

Not sure what to do but starting to freak out.
