---

I create a vps on openvz. This vps has two network interfaces, one is venet0 ,venet0:0 and the other is eth0. The ipaddr of venet0:0 is 192.168.255.2, and the eth0 ipaddr is 10.202.0.242. The ipaddr of the openvz host is 192.168.255.254. From the host, i can ping the venet0:0 192.168.255.2, but why i can't ping the eth0 of vps 10.202.0.242????

I have start the ipv4 forwarding in vps and closed the firewall.

when i try the following command:

```
ping -I venet0 10.202.0.242
```

it appears an error like: ping: sendmsg: operation not permitted.

What's the problem??

thanks

b.guo
