hi,

thanks for your reply.

I'm sorry didn't describe clearly. I just only installed a software on the container letting it run as a client not a server and there is no sql no apache. So i also think this problem is very strange.

Is this problem caused by the configuration of sysctl.conf or vz.conf?? The original set in the vz.conf is NEIGHBOUR\_DEVS=detect.

I searched on the internet and someone said it should be NEIGHBOUR\_DEVS=all.

Also someone said i should configure vz.conf to user kernel module.

How do you think? thank you!
