Hello I am new here so if I posted the wrong place please correct me.

The issue is with my new VPS on OpenVZ. One day I found all the log records before a certain time have just gone in the air, after a VPS down time, but I have been able to check the records a few mins ago, which seems so weird to me. According to my provider it is because -

Quote:The main node under which the VPS is hosted faced some temporaray issue and the concerned department have worked on it to rectify the issue and improve the performance. we checked with the another node too which is hosted under the main node it is too facing the same issue, that is having the logs from Aug 15.But presently your VPS is working fine.Please let us know if any further concerns.

My question is: is it even possible for OpenVZ technology to delete all VPS guest's logs due to a main node issue? If it is possible, what kind of main node issue could have done so? (I was previously told to be "Network" issue by this provider while I asked them why the VPS is down.)

P.S

The logs in comparison

Before:

Quote:[root@www ~]\$ tail -30 /var/log/messages

Aug 7 08:00:50 www rsyslogd: [origin software="rsyslogd" swVersion="3.18.6" x-pid="13617"]
restart
