and two more config files, as it is allowed only 5 per message.

and the /proc/bc/resources the part with failcnt on 105 VE

uid	resource	held	maxheld	barrier	limit	failcnt
105:	kmemsize	7690217	19317234	9223372036854775807		
9223372036854775807		0				
	lockedpages	0	0	131072	131072	0
	privvmpages	124484	327251	262144	274644	
418						

other VEs are fine.

how it comes, that maxheld is 327251 pages or 1278 MB, while in graphs there is no more then 500 MB !? is there is some kind of memory leak somewhere in ovz?
