and two more config files, as it is allowed only 5 per message.

and the /proc/bc/resources the part with failcnt on 105 VE

| uid | resource | held | maxheld | barrier | limit | failcnt |
|---------------------|-------------|---------|----------|---------------------|--------|---------|
| 105: | kmemsize | 7690217 | 19317234 | 9223372036854775807 | | |
| 9223372036854775807 | | 0 | | | | |
| | lockedpages | 0 | 0 | 131072 | 131072 | 0 |
| | privvmpages | 124484 | 327251 | 262144 | 274644 | |
| 418 | | | | | | |

other VEs are fine.

how it comes, that maxheld is 327251 pages or 1278 MB, while in graphs there is no more then 500 MB !? is there is some kind of memory leak somewhere in ovz?
