Hi,

I am attempting to make a openvz migration to a new hardware node.

I am using the vzmigrate utility, and i don't really want delete source container when migration finished, so the option "-r no" is required but is NOT working, really the source vps is deleted (config files are not really deleted but yes all content).

The command i use is (via ssh):

```
vzmigrate -r no --keep-dst --online -v $IP $CT_ID
```

Really this command make a good migration, BUT deleted the source vps. with "--remove-area no" the same issues.

Here the specs and versions:

Source HN:

```
Linux CentOS-52-64-minimal 2.6.18-128.1.1.el5.028stab062.3 #1 SMP Sun May 10 18:54:51  
MSD 2009 x86_64 x86_64 x86_64 GNU/Linux
```

```
vzctl version 3.0.24.2
```

--

New HN:

```
Linux CentOS-55-64-minimal 2.6.18-194.8.1.el5.028stab070.5 #1 SMP Fri Sep 17 19:10:36 MSD  
2010 x86_64 x86_64 x86_64 GNU/Linux
```

```
vzctl version 3.0.24.2
```

Thanks in advance for help and comments

Greetings!
