Hello,

1. First of all, I strongly recommend you whenever you have an Oops - immediately create a new
bug report.

2. The information that you provided will not be enough for developers to analyze the problem and
fix it.
Please, look at the following article in OpenVZ wiki:
http://wiki.openvz.org/When_you_have_an_oops
It might be necessary to install a remote console to get ALL logs from the kernel. I would
recommend serial console in this case:
http://wiki.openvz.org/Remote_console_setup

Once more, provide all information in your bugreport.
Thank you.
