Hi,

just for the record

I have upgraded my Dell Bios to latest A05

I see the kernel panic as soon has I enable the forwarding even on a non venet interface.

Here is my /etc/sysctl.conf

net.ipv4.ip\_forward = 0
net.ipv4.conf.default.rp\_filter = 1
net.ipv4.conf.default.accept\_source\_route = 0
kernel.sysrq = 0
kernel.core\_uses\_pid = 1
net.ipv4.tcp\_syncookies = 1
kernel.msgmnb = 65536
kernel.msgmax = 65536
kernel.shmmax = 68719476736
kernel.shmmall = 4294967296

As soon as I try this I get the kernel to panic sysctl -w net.ipv4.conf.eth0.forwarding

I will try to connect my console to a serial port to report the exact message and will report it as a bug when possible.

thanks
