
Subject: Adding veth101.0 to bridge breaks networking.

Posted by [rconan](#) on Mon, 04 Oct 2010 16:32:49 GMT

[View Forum Message](#) <> [Reply to Message](#)

When I add my virtual ethernet device on my host to a bridge I lose network access to the host (but the guest network starts working).

When first added I get the following in dmesg:

Quote:device veth101.0 entered promiscuous mode

type=1700 audit(1286208967.671:29): dev=veth101.0 prom=256 old_prom=0 auid=4294967295 ses=4294967295

br0: port 2(veth101.0) entering learning state

br0: port 2(veth101.0) entering learning state

At this point the network still works.

After a short while (a few seconds) I get this message:

Quote:br0: topology change detected, propagating

br0: port 2(veth101.0) entering forwarding state

at which point the network starts working.

ifconfig on the host:

Quote:br0 Link encap:Ethernet HWaddr 00:18:51:4E:9C:93
