Hi,

we have the same kernel panic problem with the kernels ovzkernel-smp-2.6.16-026test014.4.i686 and ovzkernel-smp-2.6.16-026test012.1.i686, both installed via rpm. We also build a testing kernel on our own, but same effect, kernel panic because of the initrd problem.

Our host OS is CentOS 4.3.

Hope to read about a solution soon...

Greets  
Stef
