
Subject: xt_NFQUEUE and netfilter_queue inside container not supported?

Hi,

for a filtering-applications I need xt_NFQUEUE available inside a container. The modules are properly loaded on hostnode and added to IPTABLES-Variable for this container.

But on starting the container I get

```
Unknown iptables-module xt_NFQUEUE: skipped
Unknown iptables-module netfilter_queue: skipped
```

This causes the application not to run as it can't connect to netfilter.

Does anyone have an idea how to solve this problem?

I'm running 2.6.27-openvz-levitan.1 on a gentoo-hostnode.

BR
Jens
