I already read this and i tried to put the good UBC for it
I spent 3 days to create an excel file to automatically calcul the good UBC paraemter

All run fine except the SWAP

Please could you help ? I don't want to waste your time but i really don't understand why the VPS can't swap

The swap partition is for all containers .. and in each container i see some swap but it's not accessible ..

```
[Hardware@node]# vzctl exec 122 free -m
```

	total	used	free	shared	buffers	cached
Mem:	2048	1446	601	0	0	0
-/+ buffers/cache:		1446	601			
Swap:	4194303	0	4194303
