
Subject: Wrong second level quotas for specific users

Hi,

I've second level quotas enabled on a VPS. The issue is that for some users, i'm getting a wrong size.

Example: there is a user which i've verified that his home is using 2.6GB (`du --max=1 -h /home/user`) but his quota (value reported with `repquota`) reports 4.2GB.

I checked for files outside his home and owned by him but didn't found any.

Any ideas of what should i check in this case?

I'm kind of lost since most issues about this are related to quota not working at all. In my case, it works, but reports wrong disk space.

VE OS: CentOS release 4.8 (Final)

HN OS: CentOS release 5.5 (Final)

HN kernel: 2.6.18-194.8.1.el5.028stab070.5ent

Thanks!
