Hello

i made a cPanel os template with os centos , when i create new Openvz vps from HyperVm control panel it shows failed and the error message way too long , i will post some lines from the error :-

VM creation has failed. but if i create a openvz vps with default os template which is centos-5-i386-afull and rebuild it with custom os template which is cpanel centos os it will be rebuild well

the Question is : how could i DIRECTLY rebuild the vps with the custom os template i made

NOTE :
1- i have enough space in the Node
2- custom os template size is 2546 MB

i hope someone will help me regard this issue

thanks
