---

wich are the perfect parameters for a VPS.

i mean, i know it depend of traffic and use.

But for example for a 2Gb VPS with cpanel and apache2, and the traffic is high.

kmemsize	19945332	28827293	28745400	29580328
tcpsndbuf	6577344	8446272	9940640	9940640
tcprcvbuf	677120	1977152	5440640	6406720
				42308

im getting a lot of failcnt there.
