Subject: vps goes offline
Posted by supportech on Fri, 10 Dec 2010 23:10:51 GMT

Hi All,

We have a main node openvz server with more than 25 vps's on it. Presently we are facing serious issues as the server goes unresponsive becuase of unknown reason. Nothing shows in the logs. We have checked through each vps and nothing found as crtical and disabled iptables as well. Our dc said there is no network issues from their end.

can someone have any idea what would be the cause of this issue and how to fix it??
