Hi Max,

siehe man page vzctl:

---8<...

--quotauidlimit num

sets maximum number of user/group IDs in a container for which disk quota inside the container will be accounted. If this value is set to 0, user and group quotas inside the container will not be accounted.

Note that if you have previously set value of this parameter to 0, changing it while the container is running will not take effect.

---8<...

Vorraussetzung für "quotauidlimit", das Filesystem der Container muss ein ext3 sein

```
% vzctl set <CTID> --quotauidlimit <MAX_NUMBER> [--save]
```

```
% vzctl restart <CTID>
```

Gruß,  
Thorsten
