+1

Any plans for openvz-xen Dom0/DomU 2.6.32 kernel sources? like it was with 2.6.18. I'd tried to merge patches from xen and ovz, and even have solved all of conflicts. but it fails to build almost in the beginning with this error (my patch is attached):

```
CC      arch/x86/kernel/pci-nommu.o
arch/x86/vdso/vdso32-setup-xen.c:352:5: error: conflicting types for 'syscall32_setup_pages'
/usr/src/xen/linux-2.6.32-openvz1/arch/x86/include/asm/elf.h :338:12: note: previous declaration
of 'syscall32_setup_pages' was here
make[2]: *** [arch/x86/vdso/vdso32-setup.o] Error 1
```

I've used current openvz from git and xen patches from
<http://code.google.com/p/gentoo-xen-kernel/downloads/list> to make the patch.
