I'm this having the same issue.

I would discard the option of an issue with the ubuntu template since I have 2 other VPS in the same server, based on the same template, without this issue.

```
root@machine:~# uname -a
Linux xxxxxxxx.com 2.6.24-24-openvz #1 SMP Wed Apr 15 17:40:08 UTC 2009 x86_64
GNU/Linux
```

```
root@machine:~# df -h

```

Any ideas how to sort this out? This is a production environment so I can not be experimenting this with a live server...

Many thanks!
Dário
