Subject: Re: Debian lenny to 2.6.32-5 kernel network
Posted by robfantini on Tue, 11 Jan 2011 04:03:14 GMT

Hello
 I am having similar network issues with a different kernels.

 We use proxmox-ve . and have 12 open-vz containers.

 We were using 2.6.32 and after an upgrade had issues with an ldap container . it would freeze
during a vzdump process.

 reverting to 2.6.18 solved our issues.

 on 2 other systems I did some upgrades and since then the networks have been less reliable.
those systems use samba to stream media. we have pauses randomly .   to fix them I intend to
reinstall the host .

 now I know that this does not give full detail on our issues. I am traveling and just wanted to post
this in order to let you know someone else has similar issues.
 if you need more info please ask.
