Just my \$.02 here, but Ubuntu 10.04 is a complete disaster as far as I'm concerned. They dropped the openvz kernel they had in 8.04 and upstart is a nightmare to deal with.

FWIW I switched all of my desktops and servers to Debian Squeeze (which has its own issues mostly dealing with the typical Debian out-of-date utilities - but nothing nearly as bad as !#^\$#\$^ Lucid)
