---

I reply to myself as my last thought was finally RIGHT !

The template is not good, the tar file has been created from /home/deb6 !!

I gunzip, untar it, recreated from the ./ and finally, I succeed to create a new container from this template.

I can upload the right tar.gz minimal debian v6 file , don't know how as I never did that. will try to look at that to help the community.

However thks for your help.
