Try this one:

wiki.opensvz.org/Download/kernel/rhel6/042test007.1

Recompile it. Should work with Debian 6.

It is still testing kernel. If you are going to use new RAM limits with physpages and swappages set - there is a bug: bugzilla.opensvz.org/show_bug.cgi?id=1749 and server may stuck at cpu software lock.

Anyway - this kernel has a cpu limit future so you will be able to limit your cpu resources.
